

ASYMPTOTICS OF A SOLUTION TO A PROBLEM OF OPTIMAL BOUNDARY CONTROL WITH TWO SMALL COSUBORDINATE PARAMETERS. II

A. R. Danilin

We consider a problem of optimal boundary control for solutions of an elliptic type equation in a bounded domain with smooth boundary with a small coefficient at the Laplace operator, a small coefficient, cosubordinate with the first, at the boundary condition, and integral constraints on the control:

$$\begin{cases} \mathcal{L}_\varepsilon z := -\varepsilon^2 \Delta z + a(x)z = f(x), & x \in \Omega, \quad z \in H^1(\Omega), \\ l_\varepsilon z := \varepsilon^\beta \frac{\partial z}{\partial n} = g(x) + u(x), & x \in \Gamma, \end{cases}$$

$$J(u) := \|z - z_d\|^2 + \nu^{-1} \|u\|^2 \rightarrow \inf, \quad u \in \mathcal{U},$$

where $0 < \varepsilon \ll 1$, $\beta \geq 0$, $\beta \in \mathbb{Q}$, $\nu > 0$, $H^1(\Omega)$ is the Sobolev function space, $\partial z / \partial n$ is the derivative of z at the point $x \in \Gamma$ in the direction of the outer (with respect to the domain Ω) normal,

$$a(\cdot), f(\cdot) \in C^\infty(\bar{\Omega}), \quad g(\cdot) \in C^\infty(\Gamma), \quad \forall x \in \bar{\Omega} \quad a(x) \geq \alpha^2 > 0,$$

$$\mathcal{U} = \mathcal{U}_1, \quad \mathcal{U}_r := \{u(\cdot) \in L_2(\Gamma) : \|u\| \leq r\}.$$

Here $\|\cdot\|$ and $\|\|\cdot\|\|$ are the norms in the spaces $L_2(\Omega)$ and $L_2(\Gamma)$, respectively. We find a complete asymptotic expansion of the solution of the problem in powers of the small parameter in the case where $\beta \geq 3/2$. In contrast to the previously considered case, the relevance of the constraints on the control depends on $\|\|g\|\|$.

Keywords: singular problems, optimal control, boundary value problems for systems of partial differential equations, asymptotic expansions.
